 Should Fix:

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Mobile

Your page has 5 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

[Optimize CSS Delivery](#) of the following:

- <http://copygraph.ru/css/style.css>
- <http://copygraph.ru/css/mini.css>
- <http://copygraph.ru/css/calculator.css>
- http://copygraph.ru/css/menu_polygraphiya.css
- <http://copygraph.ru/css/fm.revealator.jquery.min.css>

Consider Fixing:

Minify CSS

Compacting CSS code can save many bytes of data and speed up download and parse times.

[Minify CSS](#) for the following resources to reduce their size by 635B (16% reduction).

- Minifying <http://copygraph.ru/css/mini.css> could save 332B (16% reduction) after compression.
- Minifying <http://copygraph.ru/css/style.css> could save 160B (12% reduction) after compression.
- Minifying http://copygraph.ru/css/menu_polygraphiya.css could save 143B (34% reduction) after compression.

Optimize images

Properly formatting and compressing images can save many bytes of data.
